Related titles from Woodhead’s food science, technology and nutrition list:

**Extrusion: Technologies and applications** (ISBN: 1 85573 559 8)
Extrusion is a major technology for a wide range of food products. The first part of this book introduces this technology, examining extruders and their use in thermal transitions of raw materials into functional forms for the manufacture of particular foodstuffs. The second part of the book looks at the application of extrusion in specific product groups. It will be invaluable reference for improving efficiency and product quality in this area of the food industry.

**Frying** (ISBN: 1 85573 556 3)
Edited by one of the world’s leading authorities in the field, this collection covers the key issues in fried product quality. Part I covers general issues such as the market for fried foods, regulation and health issues. Part II covers issues on raw materials such as composition of frying oils and factors affecting the quality of oils. Part III concentrates on processing issues such as the frying process and packaging, all of which affect the flavour, texture and colour of fried foods.

**Food processing technology: Principles and practice** (ISBN: 1 85573 533 4)
The first edition *Food processing technology* was quickly adopted as the standard text by many food science and technology courses. The publication of this completely revised new edition is set to confirm the position of this textbook as the best single-volume introduction to food manufacturing technologies available. New chapters include computer control of processing, novel ‘minimal’ technologies including processing using high pressures or pulsed electric fields, ohmic heating and an extended chapter on modified atmosphere packaging.
